Dear Doctor:

The person listed above was given a visual acuity check in connection with his application for a New Jersey Driver License and was unable to meet the minimum vision standards. He has been requested to have the bottom of this form completed by a Licensed Eye Doctor.

Please list below the results of your visual examination, your diagnosis of any vision deficiency and whether or not you recommend corrective lenses be worn while driving.

VISUAL ACUITY TEST STANDARDS

FOR BASIC DRIVER LICENSE

(a) Vision will be considered as passing when a minimum of 20/50 is attained in each eye, with or without corrective lenses. This rating will be determined as measured by the Snellen Chart.

(b) When the vision in either eye is less than 20/50 and cannot be improved by means of corrective lenses, a certificate adequately explaining the deficiency and signed by a physician, ophthalmologist or optometrist, must be presented.

(c) When the vision in either eye is less than 20/50 and corrective lenses will improve the vision, then corrective lenses will be required to be worn while driving; except where corrective lenses show an improvement, but wearing lenses would be detrimental to the applicant's visual well being, a statement to this effect, signed by a physician, ophthalmologist or optometrist, must be presented.

(d) When there is no vision in one eye, the good eye must meet the minimum standard of 20/50 with or without corrective lenses.

(e) In the event that any special device or equipment is used or needed to meet the minimum requirements outlined in this Section, the matter may be referred to Safety Standards/Driver Testing for final determination.

VISUAL ACUITY TEST STANDARDS

FOR COMMERCIAL DRIVER LICENSE

A person shall not drive a commercial vehicle unless he/she has distant visual acuity of at least 20/40 (Snellen) in each eye without corrective lenses or visual acuity separately corrected to 20/40 (Snellen) or better with corrective lenses, distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses, field of vision of at least 70 degrees in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing standard red, green, and amber.
